PROFESSIONAL SUMMARY

Senior Flutter developer with 6+ years shipping consumer apps end to end — multiple live apps on both the App Store and Play Store, built on Firebase (Firestore, Auth, Cloud Functions). Deep state-management experience with Bloc, GetX, and Provider, and full ownership of codebases post-handoff: bug triage, performance optimization, store releases, and new feature delivery. 6+ years working asynchronously with remote US and European teams, reporting progress in clear, non-technical terms. Hands-on with AI-powered product features (LLM integration, embeddings, OCR). Open-source author.

TECHNICAL SKILLS

Mobile: Flutter, Dart, Flutter Web — complex state management (Bloc, GetX, Provider), GoRouter navigation, App Store & Play Store release management

Firebase: Firestore, Authentication, Cloud Functions, Cloud Messaging, security rules

Quality: E2E & stability test suites, Sentry monitoring/alerting, TDD, CI/CD (GitHub Actions), Docker

Backend & Web: Node.js, NestJS, TypeScript, React, Next.js, ASP.NET Core, REST / GraphQL

AI / LLM: LLM integration, embeddings, semantic vector search (pgvector), AI data extraction, OCR

Cloud & Data: GCP, Supabase, PostgreSQL, Cloudflare Workers, Neo4j, SQL / NoSQL

Payments: Stripe, in-app payment flows, payment gateways

PROFESSIONAL EXPERIENCE

Senior Software Developer / Mobile Architect — QA-BIT

Estonia (Remote) | Jun 2022 – Present

- Led a 6-developer team delivering **All In Biking**, a Flutter cycling-community app with real-time updates and gamified competition features on Firebase and GCP — owning architecture, code review, and App Store / Play Store releases.
- Shipped **EduQ** (Flutter exam-prep solver) and **Grocery Chef Pro** (Flutter AI meal tracking and shopping lists) to both stores — consumer apps with learning and habit-loop mechanics.
- Safeguarded production quality across mobile and web with E2E and stability test suites plus Sentry-based monitoring and alerting.
- Designed and built **Mergejob**, an AI-powered job board: LLM CV-parsing pipeline → embeddings → vector retrieval (pgvector) → LLM reranking, with Stripe payments and credit-based monetization.
- Architected **Kit Digital** (deployed for ~5 companies in Spain): Flutter app with dynamic dependency-graph forms plus a React back office — coordinating async with non-technical stakeholders.

Senior Full Stack Developer (Freelance, concurrent) — AstroCode

Remote | Aug 2025 – Present

- Building **Manitas**, a Flutter marketplace connecting users with technical-service professionals through real-time geolocation and dynamic job workflows.
- Building **Chrona**, a multi-tenant appointment/booking SaaS on a modular Next.js + NestJS architecture.

Senior Full Stack Developer — ProDev Solutions LLC

Tampa, USA (Remote) | Sep 2019 – Jun 2023 (part-time from Jun 2022, concurrent with QA-BIT)

- Built the Flutter layer of **SnappFund** on Firebase + ASP.NET Core for OCR-based donations and secure payments — live on both stores and used by several thousand congregants across Miami and Sarasota.
- Built the **DealerSlash** Flutter app from scratch with real-time inventory sync and managed its store releases; migrated the API from Java Spring to ASP.NET Core.
- Architected **Follow App** (Flutter, NestJS, Firebase): live streaming, contextual push notifications (FCM), and multi-language dashboards — sole owner of the mobile codebase, working async and reporting weekly to non-technical stakeholders.

OPEN SOURCE

hollow — Flutter package, published on pub.dev (MIT) — perfect 160/160 pub points score

- Generates pixel-perfect skeleton-loading screens by capturing the real RenderObject tree via Dart AST analysis and a CLI — globally synchronized shimmer, dark-mode support, adaptive layouts. github.com/r4yb3l/hollow

EDUCATION & LANGUAGES

B.Sc. in Computer Science — Universidad Central “Marta Abreu” de Las Villas (UCLV), 2013–2018

Languages: English — Professional Working Proficiency • Spanish — Native

Methodologies: Clean Architecture • SOLID • TDD • Agile/Scrum • CI/CD • Design Systems
