

RAYBEL HERNANDEZ

Senior Full Stack Engineer • React / Next.js • Node • AI-Powered Products

Estelí, Nicaragua (Remote — US Central Time) | +505 8839 0152 | raybel.developer@gmail.com
linkedin.com/in/r4yb3l | github.com/r4yb3l | raybel-hernandez.netlify.app

PROFESSIONAL SUMMARY

Senior full-stack engineer with 6+ years taking products from architecture to production for US and European companies. Modern web stack (React, Next.js, TypeScript, Node/NestJS) with deep hands-on experience building AI-powered systems in production: LLM pipelines, embeddings, semantic vector search (pgvector), and OCR data extraction. Led a 6-developer team; migrated legacy platforms (Java Spring → ASP.NET Core, Angular → React). Strong async communication across 6+ years of remote work. Open-source author. Based in Nicaragua — full overlap with US time zones.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript, Angular, responsive UI, design systems

Backend: Node.js, NestJS, ASP.NET Core (C#), REST / GraphQL APIs

AI / LLM: LLM integration, embeddings, semantic vector search (pgvector), LLM reranking, AI data extraction, OCR

Data & Cloud: PostgreSQL, Supabase (RLS, SECURITY DEFINER), GCP, Firebase, Cloudflare Workers, Neo4j, SQL / NoSQL

Quality: E2E & stability test suites, Sentry monitoring/alerting, TDD, CI/CD (GitHub Actions), Docker

Mobile: Flutter, Dart — complex state management (Bloc, GetX, Provider), store release management

Payments: Stripe, credit-based monetization, payment gateways, QuickBooks

PROFESSIONAL EXPERIENCE

Senior Software Developer / Mobile Architect — QA-BIT

Estonia (Remote) | Jun 2022 – Present

- Designed and built **Mergejob**, an AI-powered job board that ranks listings by semantic fit with the candidate's CV: LLM CV-parsing pipeline → embeddings → vector retrieval with pgvector → LLM reranking, on a distributed architecture (Next.js, Supabase/Postgres, Cloudflare Workers). Built credit-based monetization with field-level paywalling (RLS + Postgres SECURITY DEFINER), Stripe payments, and a real-time feed with polling fallback.
- Refactored **Alpha-Brokers Retarificador** from a legacy platform into a modern React SPA with AI/OCR data extraction, replacing manual quote entry with an automated ingestion flow.
- Led a 6-developer team delivering **All In Biking**, a Flutter community app with real-time updates and competition features on Firebase, GCP, and a Neo4j graph model.
- Delivered the React dashboard and Flutter app of a multi-tenant **HR Management** platform with complex role-based access control; migrated a **Community Token Management** wallet app from Angular to React.
- Architected **Kit Digital** (deployed for ~5 companies in Spain): React back office for agent management and analytics plus a Flutter app with dynamic dependency-graph forms.
- Safeguarded production quality across web and mobile with E2E and stability test suites plus Sentry-based monitoring and alerting.

Senior Full Stack Developer (Freelance, concurrent) — AstroCode

Remote | Aug 2025 – Present

- Building **Chrona**, a multi-business SaaS for appointment and booking management on a modular Next.js + NestJS architecture designed to scale across tenants.
- Building **Manitas**, a Flutter marketplace with real-time geolocation and dynamic job workflows.

Senior Full Stack Developer — ProDev Solutions LLC

Tampa, USA (Remote) | Sep 2019 – Jun 2023 (part-time from Jun 2022, concurrent with QA-BIT)

- Led **DealerSlash**'s technical transformation: migrated the API from Java Spring to ASP.NET Core and built the mobile app from scratch with real-time inventory sync.
- Built **SnappFund** (ASP.NET Core + Firebase backend, Flutter front) for OCR-based donations and secure payments, adopted by faith communities across Miami and Sarasota — several thousand active users.
- Architected **Follow App** (NestJS, Firebase, Flutter): live streaming, contextual notifications, and accessible multi-language dashboards — working async with non-technical stakeholders.

OPEN SOURCE

hollow — Flutter package, published on pub.dev (MIT) — perfect 160/160 pub points score

- Generates pixel-perfect skeleton-loading screens by capturing the real RenderObject tree via Dart AST analysis and a CLI — globally synchronized shimmer, dark-mode support, adaptive layouts. github.com/r4yb3l/hollow

EDUCATION & LANGUAGES

B.Sc. in Computer Science — Universidad Central “Marta Abreu” de Las Villas (UCLV), 2013–2018

Languages: English — Professional Working Proficiency • Spanish — Native

Methodologies: Clean Architecture • SOLID • TDD • Agile/Scrum • CI/CD • Design Systems
